Regarding: 1/4" hook bolts 1521, 1522, 1523, 1524, 1525, 1526

The anchor portion of hook bolt assembly has a proof test load of 1500 lbs tested in accordance with ASTM E488. Recommended safe working load is one fifth (300 lbs) of the proof test load. Safe loads are offered as a guide and do not guarantee specific performance due to variables in installation, masonry materials, tools and workmanship. The stud used in the hook bolt assembly conforms to ASTM A307 for grade A studs.
